

ZyLAB is the only product of its kind that makes language a non-issue.

Other products cannot quickly overcome the language barriers that often exist for multinational companies, global investigations, and intelligence and security organizations.

Foreign language tools are available with all of our Enterprise Information Management solutions, including the following systems:

- ZyLAB Information Management Platform
- eDiscovery & Production system
- Compliance & Litigation Readiness system
- Law Enforcement & Investigation system
- Communications Intelligence system
- Digital & Print Media Archiving system

Only ZyLAB breaks down global barriers

Foreign Language Support

ZyLAB is the only information management product that detects and translates huge volumes of foreign language content without sacrificing speed or accuracy. Global organizations and cross-border investigators can archive, index, and search foreign e-mail and electronic files, or automatically translate the content and link to the original version.

- ZyLAB detects and recognizes 400 foreign languages—from all Western-European, to most regional indigenous languages.
- ZyLAB can full text-index any language that can be represented in UNICODE characters.
- ZyLAB provides customized interfaces in 26 foreign languages including Dutch, German, Spanish, Swedish, French, Arabic, Farsi and Khmer.
- ZyLAB offers the highest speed and throughput commercially available for automatic, statistics-based translation of 40 languages, including non-roman scripts like Cyrillic, Arabic, Farsi, Hindi, Hebrew, Chinese and Japanese.
- ZyLAB provides “lenient” search techniques such as Fuzzy and Wildcard that help mitigate poor 3rd-party translations of enterprise information.
- ZyLAB reconciles differences in character sets and words, and uses statistics and linguistic properties (i.e., conjunction, grammar, meanings) so that foreign content can be mined and analyzed.

Meet Global Standards

ZyLAB is certified and registered as compliant with the International Standards Organization (ISO) 9001:2000, US-DoD 5015.2, the European MoReq2 standard, and various other global regulations and benchmarks.
