

ZyLAB is the only product of its kind that retrieves all relevant data—even if it is obscured. Other products function like basic search engines that retrieve only the most popular, or optimized, hits.

Tools for 100% recall are available with all of our Enterprise Information Management solutions, including the following systems:

- ZyLAB Information Management Platform
- eDiscovery & Production system
- Compliance & Litigation Readiness system
- Law Enforcement & Investigation system
- Communications Intelligence system
- Digital & Print Media Archiving system

Only ZyLAB yields 100% recall

Cast the widest net

ZyLAB is the only information management product that delivers 100% recall of potentially relevant data by coupling advanced search techniques with the ability to decipher complex files. This unique combination casts the widest possible net for each search.

SEARCH COMPLEX FILES THAT ARE OMITTED BY OTHER PRODUCTS

- Files that are stored in **compressed or compound files** (e.g. ZIP, RAR)
- **Bitmap** (e.g. PDF, TIFF) image files and scanned documents
- **Multi-directional OCR** files
- Information that is contained in **nested e-mail** messages
- Files that are **attachments to e-mail** messages
- Information in 400+ **foreign languages** including Arabic, Chinese and Japanese.

ZyLAB will retrieve all potentially relevant information—even if it is hidden in a bitmapped French document that was scanned at a 90 degree angle, zipped, attached to an e-mail, and subsequently nested in another e-mail message.

LEVERAGE THE WIDEST ARRAY OF ADVANCED SEARCH TECHNIQUES

ZyLAB's exploratory tools overcome the limitations of techniques like Boolean, proximity, and key field which require you to know the exact search term.

- **Fuzzy Search** retrieves words that are similar to the original search term. This is particularly useful for OCR errors, misspellings and spelling variations.
- **Wildcard Search** replaces any character in a word that may be illegible or unknown (i.e., searching on a phone number without knowing the first digits).
- **Text Mining & Analytics** extract facts, entities, hidden file properties, and previously unknown search terms like aliases and synonyms.

Refine the hits to those that matter

Achieving 100% recall is only advantageous if you have tools to manage a larger hit list. ZyLAB provides Hit Highlighting & Navigation, Relevance Ranking, Faceted Search, and Data Visualization tools to help you review and refine the results.

To learn more about 100% recall from ZyLAB, visit zylab.com or call 1.866.995.2262 for assistance.
